

# Division

Skills	Concrete	Pictorial	Abstract
<b>Sharing into equal groups</b>  each, share, equally, group, groups of, lots of,	$6 \div 2$ 		  <i>*End of YR target*</i>
<b>Division as grouping</b>  divide, number line, left, left over, subtract, array	Divide quantities into equal groups. Use cubes, counters or objects to aid understanding. 	Use a number line to show jumps in groups. The number of jumps equals the number of groups.   Use of a bar model to build groups of 3.	$28 \div 7 = 4$  Divide 28 into 7 groups. How many are in each group?  <i>*End of Y1 target*</i>
<b>Division within arrays</b>  array,	Link multiplication to division by creating an array and considering the different number sentences.  $15 \div 5 = 3$ $15 \div 3 = 5$	Draw arrays and use lines as necessary to split into groups. 	Find the inverse of multiplication and division sentences by creating four linking number sentences. $3 \times 5 = 15$ $5 \times 3 = 15$ $15 \div 5 = 3$ $15 \div 3 = 5$  <i>*End of Y2 target*</i>
<b>Sharing using place value counters</b>  place value, counters, exchange, remain, remainder, multiple,	$42 \div 3$ 	Convert from physical manipulation of place value counters to drawing in the grid  Refine bar model to show groups. 	Division through chunking $42 \div 3$  Progress to efficient 'chunks'.  Progress to remainders and 3-digit numbers.  <i>*End of Y3 target*</i>

# Division

<p><b>Short division</b></p> <p>inverse, divisible by, carry, short division, factor, how many groups of __ in __, remainder as fraction</p>	<p>615 ÷ 5</p>  <p>How many groups of 5 hundreds can you make with 6 hundreds?</p> <p>Exchange 1 hundred into 10 tens. How many groups of 5 tens can you make with 11 tens?</p> <p>Exchange the 1 ten for 10 ones. How many groups of 5 ones can you make with 15 ones?</p>	<p>Represent the counters pictorially.</p> 	<p>Children can now use the short division method and carry remainders numerically to complete the calculation.</p> $\begin{array}{r} 123 \\ 5 \overline{) 615} \\ \underline{5} \phantom{00} \\ 11 \phantom{0} \\ \underline{10} \phantom{0} \\ 15 \\ \underline{15} \\ 0 \end{array}$ <p><b>N.B. See Written Methods page</b></p>
<p><b>Long division</b></p> <p>long division, common factor, remainder as decimal, rounded</p>	<p>2544 ÷ 12</p>  <p>We can't sort two thousands into twelve groups, so we exchange them into thousands.</p> <p>2 groups of 12 hundred makes 24 hundred. Once subtracted, 1 hundred remains and forms 14 tens. One group of 12 tens can be made, leaving 2 tens to from 24 ones, which makes 2 groups.</p>		<p>Children apply their learning of short division, and write the groups underneath to use column subtraction to calculate a remainder. The next digit then meets the remainder rather than carrying the remainder over.</p> <p><b>N.B. See Written Methods page</b></p>
<p><b>Mental Strategies</b></p> <ul style="list-style-type: none"> <li>- Count using times tables</li> <li>- Make links with halving and quartering; use scaling for larger numbers</li> <li>- Use arrays</li> <li>- Use known times tables facts and place value</li> <li>- Use related facts</li> <li>- Use relationship between x and ÷</li> <li>- Partition in different ways to divide</li> <li>- Use factors pairs to simplify original division sum</li> <li>- Use distributive law to divide <math>(98 \div 7 = (70 \div 7) + (28 \div 7))</math></li> <li>- Counting in steps of powers of 10</li> </ul>			

# Division

## Conceptual variation (to build fluency):

$$1044 \div 12$$

Biscuits are packed into boxes of 12. How many boxes are needed to pack 1044 biscuits?

$$? = 1044 \div 12$$

$$12 \overline{) 1044}$$

Prove that 1044 candles can be shared equally amongst 12 boxes.

1044											

## Written Methods of Division

N.B. Written abstract methods must only be used once children have a secure understanding of the operation and place value.

### 1. Short division (no carrying)

$$63 \div 3$$

2	1
3	63

### 2. Short division (carrying remainders)

$$84 \div 6$$

1	4
6	8 <sup>2</sup> 4

$$615 \div 5$$

1	2	3
5	6	1 <sup>5</sup> 5

### 3. Short division with remainders

$$421 \div 9$$

0	4	7	7
9	4	2	6

#### Teaching Point

Ensure that children are taught how to represent remainders as integers and as fractions.

*\*End of Y4 target\**

### 4. Short division with decimal points

$$343.56 \div 6$$

0	5	7	.	2	6
6	3	4	.	3	6

#### Teaching Point

Once children are secure in remembering the decimal point, it can sit on the line in between boxes.

*\*End of Y5 target\**

### 5. Long division

$$2544 \div 12$$

0	2	1	2
1	2	2	5
-	2	4	
	1	4	
-	1	2	
		2	4
-		2	4
			0

#### Teaching Point

Children apply their learning of short division, and write the groups underneath to use column subtraction to calculate a remainder. The next digit then meets the remainder rather than carrying the remainder over.

For decimal long division, add the decimal point before solving the calculation.

### 5a. Alternative method: factor pairs (Double bus stop)

$$165 \div 15$$

0	5	5
3	1	6
	5	5

#### Teaching point

Children record a factor pair of the 2-digit divisor and complete 2 short division sums in place of long division.

This option must only be used for children who cannot fluently apply long division. **N.B.** This does not work if the divisor is prime.

*\*End of Y6 target\**
